

Clinitrak Online™ for Behavioral Health Providers

Clinitrak Online™ is software developed to specifically address the needs of behavioral health providers, clinicians, and managers. Created as an integrated solution, the application includes billing, productivity, and outcome tracking features.

Current Challenges

Behavioral health providers face significant challenges as they are called upon to address evolving configurations for regulatory compliance. HIPAA rules for both privacy and security of data are driving agencies to find cost-effective, yet timely means to comply. The risks of non-compliance expose agencies to audit disallowances and potentially catastrophic consequences. Other governmental drivers prescribing the quality of patient records create additional demands on the agency and its staff.

To reduce business risk, behavioral health providers are discovering a growing need for the accurate management of their healthcare records. Today's clients have more complex problems that require active coordination of team interventions and informed supervisory guidance. Funding sources require fully documented audit trails of the services rendered. Behavioral health agencies also face increasing demands to justify the nature and intensity of services and to document medical necessity. Clinicians wrestle with issues of accountability and measurable outcomes.

Clinitrak Online provides an easy-to-use, yet powerful interface for easy access to the application's many features and productivity tools. An integrated suite of data entry screens facilitates multi-level tracking and reporting. [Above: Client Demographics window]

How It Works

Clinitrak Online™ is accessible from anywhere that you have Internet access. Because it is a web-based application, there is no software or hardware to install. Using your favorite Internet browser, start a session by securely logging in using your user name and password. Clinitrak Online captures a complete log of all user logins and system use.

After logging into Clinitrak Online, you will find an intuitive, yet flexible user interface allowing for efficient navigation through the application. Its logical organization features a complete vertical integration of functions relating client, clinician, and administrative data.

Clinitrak Online effectively supports your agency's workflow and documentation processes. Clinicians will find it easy to enter Progress Notes that incorporate billing and outcome data.

Automated queuing advises supervisory staff of notes awaiting review, and facilitates tracking of revisions. Managers will appreciate the built-in capability for internal, pre-submission review of claims and utilization data. To ensure complete protection of data, off-site backups are performed daily.

Clinitrak Online™

Technology without Complexity

Continued from previous page

The current business climate dictates that all businesses, including behavioral health agencies, become more productive with fewer resources. Clinicians, as well as managers, are looking for easy-to-use tools that facilitate management of data and oversight. Agencies must look to technology to address workflow management issues such as the supervisory review and approval of progress notes, the double entry of billing data session notes, and the real-time monitoring of productivity.

Clinitrak Online™ Delivers

Crafted with today's behavioral health agency in mind, Clinitrak Online delivers an easy-to-use, yet sophisticated software solution to clinicians and managers. With features that address regulatory compliance, data management and productivity monitoring, Clinitrak Online helps organizations improve clinical oversight and control IT and data entry costs while reducing business risk.
